

# ADVANCED TURNOUT GEAR CLEANING CO2+ TECHNOLOGY SAVES LIVES

## We clean all PPE, including:

- Turnout Gear
- Hoods
- Boots
- Gloves
- Helmets
- SCBA's

We are a full-service ISP facility that performs advanced cleaning, inspections, and repairs. We use the industry's newest and best gear-cleaning technology, CO2+ technology, which is cleaner for you and the environment.

## HOW TOXIC REMOVAL WORKS

Liquid CO2 is paired with environmentally friendly additives to effectively remove toxic organics, metals, and NFPA-specified biological markers in a single cleaning process. Where water only touches the surface, liquid CO2+ technology penetrates all layers of PPE, capturing toxins at the molecular level. This facilitates the removal of toxins without soaking or scrubbing, which often contributes to PPE material degradation. Our process also uses a lower RPM rotation to provide an effective yet gentle cleaning process.

Extends the life of the equipment and its users

Eliminates over 99% of carcinogens

Eco-friendly – No water needed, recycled CO2 & safe containment disposal
