The Challenge

With utilities likely accounting for more than 15% of your budget, small rate changes or billing errors—which often go unnoticed—can have substantial financial impact when multiplied over time and across multiple locations.

How We Can Help

Our comprehensive, audit-first approach reduces energy rates, optimizes consumption, and identifies recovery opportunities. With over 50 years of combined experience, our expert team has a 95% success rate in generating verified savings.

Rate Reduction

In regulated markets, we analyze all available rate classes and riders to ensure that each account is on the most favorable plan for its usage profile. In deregulated markets, we use a reverse auction platform to secure competitive energy supply contracts.

Revenue Generation

While we search for savings, we'll help to monetize your utilities while recovering overpayments and unlocking refunds.

Monetization

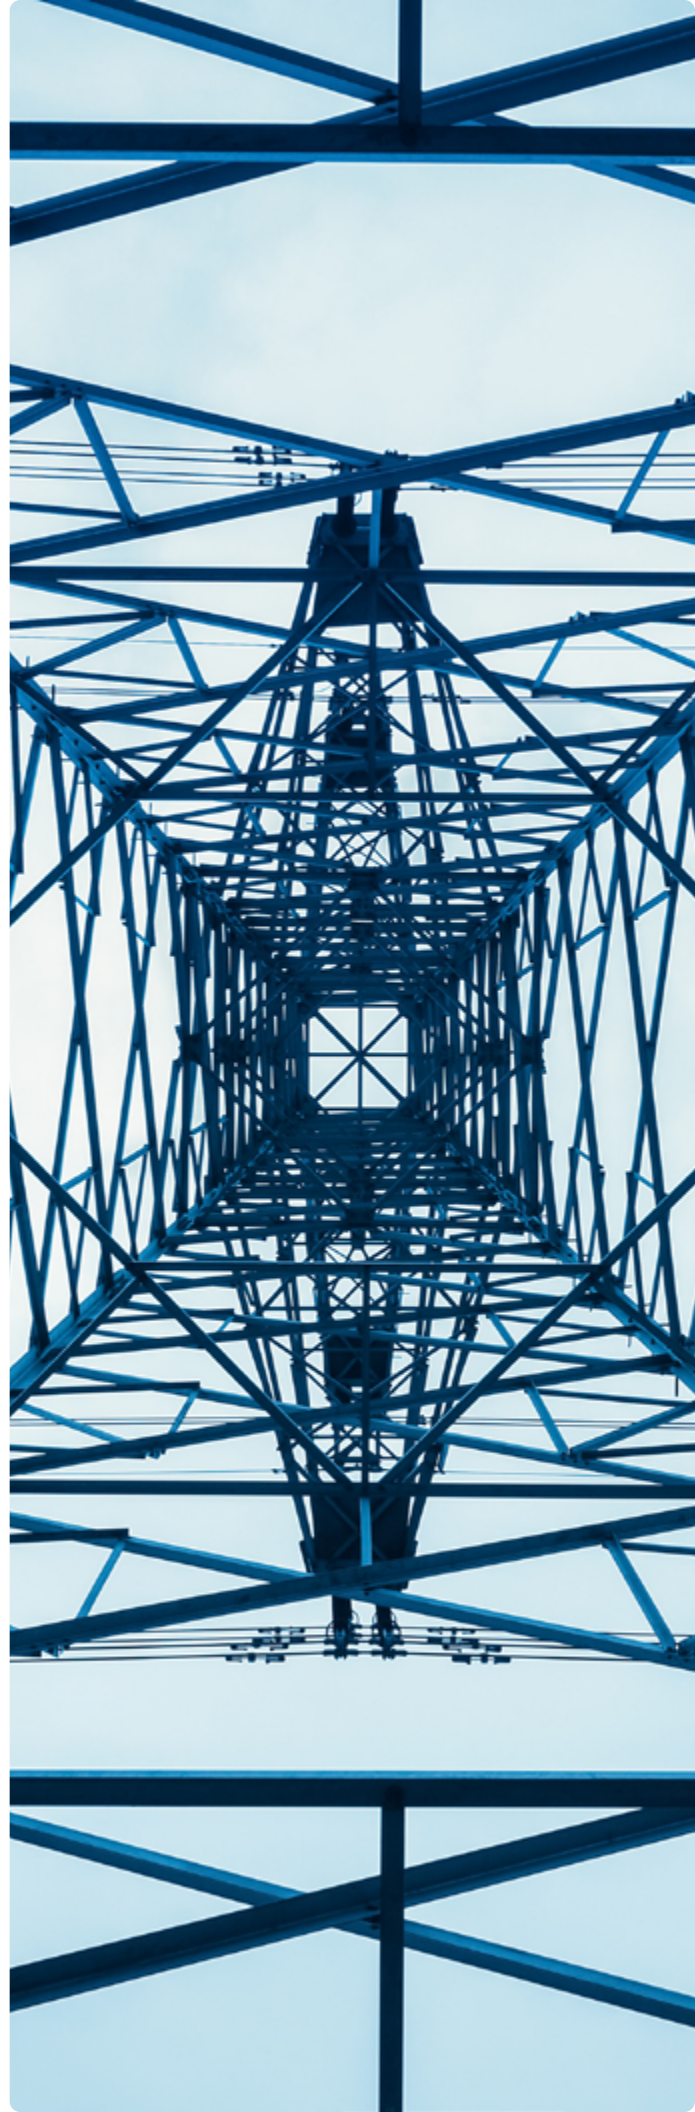

Turn operational flexibility into financial gain through participation in energy market programs.

Demand Response & Load Management

Generate revenue and reduce costs by adjusting usage during peak demand events.

Tax Exemption & Recovery Audits

Identify and recover overpaid utility taxes, securing refunds and future savings.

Analytics & Oversight

Clear and consistent reporting on your utilities usage and expenses is critical in avoiding unnecessary expenses and optimizing your utilities spend. Our Energy Analytics Portal provides:

Real-Time Analyses

Monitor efficiency and usage trends.

Quick Comparisons

Easily compare current and historical demands.

Custom Alerts

Receive price change and contract renewal alerts.

Market Dashboards

Review market rates and trends at-a-glance.

Organize Bills & Contracts

View all of your energy contracts together.

Inventory

See your entire inventory—all accounts and meters—in one place.

Demand Management

Our experts can significantly reduce your energy demand by implementing any of the following methods and efficiencies:

Energy Insights

Use data-driven analysis to find inefficiencies and optimize facility performance.

Energy Efficiency

Implement controls, upgrades, and system adjustments to reduce consumption.

LED Lighting

Upgrade to high-efficiency LED systems for immediate energy savings and lower maintenance costs.

Solar & Storage

Deploy on-site renewable energy to offset demand and manage peak usage.

Combined Heat & Power

Capture and reuse heat from power generation to increase overall system efficiency.

Water Consumption Optimization

Apply smart valve technology to lower water use without restricting flow.

Harmonics Mitigation

Install passive filter systems that improve power quality, reduce kilowatt demand, and extend equipment life.

Supply Management

When searching for maximum cost reduction, your supply is as important as your usage.

Wholesale Power & Gas

Source competitive energy supply contracts using our reverse auction platforms and direct market access.

Gas Supply

Secure favorable rates and terms for gas supply through strategic procurement.

Power Supply

Negotiate electricity contracts that align with usage patterns and market conditions.

Strategic Energy Management

Combine procurement, rate optimization, and market monitoring to reduce long-term energy costs.

Recent Utilities Audit Findings

Annual Spend	Proposed Spend	3-Year Savings	Savings %
\$110,880	\$95,580	\$45,900	14%
\$237,744	\$152,028	\$257,148	36%
\$806,148	\$715,368	\$272,340	11%
