### The Challenge

Managing telecom services as your organization grows is an ever-growing challenge. Multiple locations, hundreds of lines and devices, and multiple vendors make securing the best rates—and paying only for what you need—a serious challenge.

That's probably why 83% of all telecom invoices have mistakes. Mistakes that are almost impossible to catch without a thorough audit.

# How We Can Help

Our audit covers every area of your telecom service and includes a physical line audit. We not only analyze your invoices and ensure that you're paying the best rates, we catch any device or line that's broken, unused, or erroneously charged for.

## Line Audit Inventory

Our physical line audit matches the lines and circuits in each of your buildings to the lines and circuits on your phone bills. We find lines and circuits that are being billed but don't exist, bills for lines from previous locations, and mismatches between the price of a line and its actual usage.

## Pricing Consistency

We make sure you're paying the same rate for the same service across each of your locations.

## Benchmarking

Using our proprietary national database, we benchmark your rates against those of similar organizations. We then negotiate with your vendors to capture the best prices.

## Billing Errors

Our audit catches all possible billing errors—fraudulent charges, improper taxes, and unnecessary charges.

## Cloud Options

We can recommend—and help to implement—cloud options that can simplify and streamline your current telecom solutions.
