APEX

Cloud-Native Mission-Critical Call Management

## What is APEX?

APEX is the leading cloud-native emergency call management solution.

Full Call Management

APEX supports full emergency call management functionality including NG911 i3/ESInet as well as E911/CAMA frameworks.

Cloud Native Platform

Don't let hurricanes, floods, fires, earthquakes, power outages, terrorist attacks, and other catastrophes stop your mission-critical operations.

Perimeterless Security Architecture

APEX supports industry-leading Perimeterless Security Architecture to ensure your systems are off-limits to hackers on the internet.

Accurate, Dynamic, Caller Location

Know the exact location of your caller using Carbyne location even when ANI/ALI fails and when AML fails.

Silent Instant Messaging

When your caller is in an unsafe environment when speaking aloud is not an option, APEX Silent Instant Messaging can help you maintain real-time communication when it matters most.

Live Video (Patented)

Get eyes on the scene of the emergency when the caller clicks a link on their phone. Take guesswork out of your operation.

"Migrating to APEX means OPCD telecommunications will have to view one system on their screen, instead of the split screen environment they have today."

Tyrell Morris
Executive Director
Orleans Parish Communications District
