

# True Interoperability®

Transforming the Nature of Law Enforcement Response to Public Safety Emergencies Through Automated Emergency Response Solutions. Saving Lives by Reducing Time to Incident Resolution.

Incident Management

Unified Communications

Event-Based Collaboration

Information Fusion

## LNK360™

Mutualink's LNK360 Platform powers a planned, coordinated, and speedy response in emergencies. Also, can be used as a daily communications tool to enhance routine security and operational efficiencies, reducing cost.

The intelligent, invitation-based, incident management technology enables seamless sharing of live video stream, smart floor plans, 2 way radio voice and vital data between users and their regional first responders.

- ✓ True Interoperability® as Service—Land Mobile Radio (LMR), LTE and VoIP interoperability
- ✓ Secure Multimedia Messaging
- ✓ Multi-source LIVE Video Sharing
- ✓ Push-to-talk (PTT) Talkgroups
- ✓ Cross-Carrier Communications
- ✓ Data and File Sharing
- ✓ Drone and IoT Sensor Integration
- ✓ Real-time Location Mapping
- ✓ API Integration

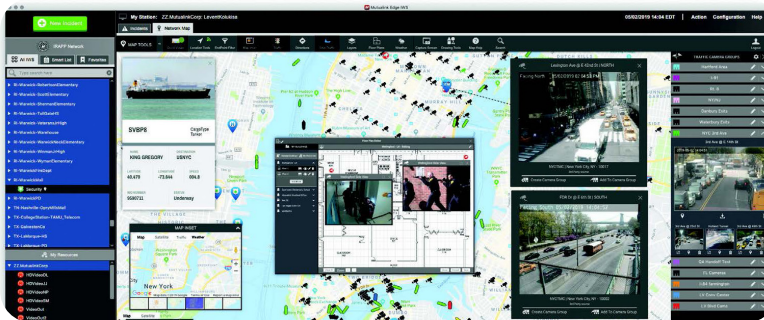

## Powerful Tools Tailored to Your Needs

Mutualink's platform includes real-time mapping and data display capabilities to increase your situational awareness. With Mutualink, you receive access to an array of real-time data feeds displayed on a live map. Mutualink can quickly and affordably integrate data for monitoring to meet your special operational needs as well as emergencies.

## Instant Sharing of Voice, Video and Smart Floor Plans With Public Safety

In an emergency, voice communications between public safety and both local and remote security personnel is instantly established along with delivery of real-time video feeds and smart floor plans, giving law enforcement the situational awareness they need to launch a quick, efficient and coordinated response.

## Making Your Existing Alarms, Sensors, and Systems Smarter & Actionable

Mutualink integrates with your existing panic alarms and sensor systems, to create a stronger and smarter cohesive security system. Based on sensor location, camera feeds near the event are the first to be shared, getting instant eyes on the central point of action while enabling quick access to all cameras on site.
